THE ASK

€1M

on a SAFE at a €10M pre-money cap.
€350K already raised with angel investors at a €5M pre-money cap.

Use of funds: 50% partnerships and integrations, 40% protocol development and security audits, 10% operations.
Deployed over 24 months against a target of €100M monthly transaction volume by mid-2027.

THE PROBLEM

Every payment on a public blockchain is visible — who you pay, how often, and at what price.

That exposes suppliers, payroll and treasury to competitors, and exposes an AI agent's vendor strategy in real time.

Enterprise adoption is starting, but confidentiality is a precondition for adoption.

Stablecoins settled \$33T in 2025. BCG estimates real-economy payment activity at ~\$550B, growing ~60% annually.

BUSINESS MODEL

Protocol fees on flow
10 bps on deposit,
10 bps per aggregation,
20 bps on withdrawal,
taken in the transacted asset.

Partner licensing
Onboarding fee plus
recurring licence.

Customers
RWA platforms and
AI agent frameworks
(50%), wallets (20%),
networks (20%), dApps
and developers (10%).

MARKET OPPORTUNITY

TAM

\$550B

stablecoin real-economy
payments

SAM

\$410B

privacy-relevant use
cases (~75% of TAM)

SOM

\$2B / yr

stablecoin payments

Tokenised trade finance and private credit:

TAM \$2.5T financing gap | SAM \$625B | SOM \$5B / year.

THE SOLUTION

Curvy Protocol is the confidentiality layer for payments on public blockchains.

Stealth addresses plus ZK-SNARK note aggregation hide sender, recipient, amount and asset while transactions remain verifiable.

Portals automate the path end to end, and Curvy never accesses user funds.

Confidential is not anonymous: screening, view keys and taint tracking are built in for regulated integrators.

Live on 11 chains. No shield/unshield, no separate keys, no new address format, no gas token.

NOTEWORTHY MILESTONES

- **May 2026** — Production launched; live on 11 networks with automatic cross-chain routing.
- **2026** — SDK, web app, private swaps, MCP server and AI skills shipped.
- **2026** — Audited by Ethernal: no Critical and no High severity findings; zero Protocol findings; all resolved and confirmed.
- **2026** — L1FL integration live; GLEIF, Finspot with DIFO, and GnosisVPN in development.
- **2026** — 2,000+ registered users, \$500K+ cumulative volume.
- Backed by Ethereum, Starknet and Arbitrum foundations. Team of 11, four previous exits together, two PhDs in ZK.

KEY PERFORMANCE INDICATORS

	2026	2027	2028
Revenue	Pre-revenue	€4M+ ARR	€10M+ ARR
# of Customers	2,000 retail, 1 integration live, 4 in dev.	10,000 retail, 20 integrations	20,000 retail, 50 integrations
# of Employees	11	15	20
Monthly transaction volume	€10M	€100M+	€300M+
